

**YOUR
ORDER
PROCESS
SUCKS!**

**NOT TO WORRY THOUGH,
WE HAVE A SOLUTION**

**Okay, in truth, the current
process is reasonably good.**

**But it could
be better**

Unfortunately, if it's not doing
as well as it could, you're
losing money...

**Not that you need telling –
you're senior hospital executives!**

**So what exactly is wrong
with the current process?**

There are a few **REDUNDANCIES**

e.g. the hospital stores

It is

INEFFICIENT AND EXPENSIVE

On average, it costs

\$39.91

for every daily order process

&

\$87.40

for every weekly order process

It is

INEFFICIENT AND EXPENSIVE

On average, it takes about

10 hours and **45 minutes** to complete a daily order

But only about

1 hours and **45 minutes** is actually spent working

It is

INEFFICIENT AND EXPENSIVE

On average, it takes about

14 hours and **35 minutes** to complete a weekly order

But only about

3 hours and **20 minutes** is actually spent working

It is

INEFFICIENT AND EXPENSIVE

- There is a significant wait time to receive goods into wards if the item is out of stock
- Checking if an item is out of stock also takes time and is a manual process
- Plus many more issues

Will someone
please think of
the trees?! ~.....

Then there's the

MANUAL WORK

- There are too many paper forms and outdated technologies like faxes and cheques
- Paper-based systems are prone to error
